

IUG 2018 in Berlin, Germany

Usefulness and Presentation – (General + Adabas-Natural)

What did you like in particular?

- More live demos and fewer slides, different use cases of customers worldwide, focus on modernization, diverse audience
- The presentation by Zvonimir Ivanetic on Docker and NatOne
- DevOps presentations by Zvonimir Ivanetic
- Opening session
- Clients' experiences, networking
- Technical answers to my questions by Software AG
- Nissan US
- Customer presentations; continuous deployment; future presentations; product intro
- Flow of the presentations, on-line demos, user presentations, road map
- Everything
- Good presentations (also from customers); lively interest in IUG but almost too many people
- Networking, live demos
- Open forum, friendliness of all participants; get in touch with others
- New innovations like Docker etc.
- Networking, contact to Product Management, sharing of experiences
- Presentations by Stefan Macke
- Containerization and DevOps; Stefan Macke's presentation, very passionate presentation
- Splint in "focus" area instead of product area (Ada/Nat)
- NaturalONE – better late than never
- No boring roadmaps presentations and over-technical talk about new Adabas settings etc.

IUG 2018 in Berlin, Germany

Usefulness and Presentation – (General + Adabas-Natural)

What can we do better next time?

- I missed topics like Natural Ajax, Responsive Web Design
- Maybe each client could prepare a few technical questions in advance and so the specialists could prepare them to answer; and we customers don't have to find out who could answer.
- Possibly more demos and tech breakout sessions
- Go back to the separate Adabas-Natural tracks; this would be better for those attendees, who are interested in only one of the topics and have little time
- Some presenters were hard to understand
- Presentations have to be in English; Luciano did a good job but it took too long
- Nothing
